Milestones Supplemental Guide

This document provides additional guidance and examples for the Pediatric Orthopaedic Surgery Milestones. This is not designed to indicate any specific requirements for each level, but to provide insight into the thinking of the Milestone Work Group.

Included in this document is the intent of each Milestone and examples of what a Clinical Competency Committee (CCC) might expect to be observed/assessed at each level. Also included are suggested assessment models and tools for each subcompetency, references, and other useful information.

Review this guide with the CCC and faculty members. As the program develops a shared mental model of the Milestones, consider creating an individualized guide (Supplemental Guide Template available) with institution/program-specific examples, assessment tools used by the program, and curricular components, including rotation mapping.

Additional tools and references, including the Milestones Guidebook, Clinical Competency Committee Guidebook, and Milestones Guidebook for Residents and Fellows, are available on the Resources page of the Milestones section of the ACGME website.

Patient Care 1: Foot Pathology	
Overall Intent: To identify, manage, and definitively treat foot deformities of varying complexities with appropriate work-up and interventions including operative and non-operative methods	
Milestones	Examples
Level 1 Obtains a patient history, performs a physical examination, and develops a differential diagnosis for patients across clinical settings	Obtains appropriate history, including birth and family medical history Performs physical exam including Silfverskiold test and Coleman block testing
Demonstrates surgical skills, assists with procedures, and identifies complications	Demonstrates basic soft tissue handling, including wound closures
Performs routine splinting and casting and assists in manipulative casting (e.g., clubfoot casting)	 Performs routine splinting and reduction in emergency room for lower extremity fractures and sprains Assists with manipulative casting and demonstrate safe cast application techniques
Level 2 Orders and interprets diagnostic testing and consultations based on patient evaluation	Orders appropriate x-rays (weight-bearing) and advanced imaging when necessary (computed tomography (CT) for evaluation of tarsal coalition)
Performs routine procedures and manages complications, with indirect supervision (e.g., Achilles tenotomy, tibialis anterior transfer, simple polydactyly)	Performs percutaneous Achilles tenotomy, tibialis anterior transfer, or simple polydactyly with indirect supervision
Performs critical steps of manipulative casting, with direct supervision	Performs molding portion of manipulative casting with direct supervision
Level 3 Synthesizes a plan to manage patients with straightforward conditions, including non-operative options (e.g., manipulative casting, orthotic prescription)	 Appropriately counsels family about clubfoot regarding casting, brace wear, recurrence risk and long-term follow-up Discusses treatment for cavus foot, recognizes need for further neurological work-up when necessary
Performs routine procedures and manages complications, with oversight and performs complex procedures with indirect supervision (e.g., osteotomy-calcaneal lengthening, bunion correction)	Performs osteotomies including calcaneal, cueniform, and bunion correction with indirect supervision

Performs critical steps of manipulative casting, with indirect supervision	Molds manipulative casts with indirect supervision
Level 4 Synthesizes a comprehensive plan to	Develops surgical recommendations for recurrent clubfoot
manage patients with complex conditions and	Develop treatment recommendations for complex conditions including complex
comorbidities, including non-operative options	polydactyly, macrodactyly, ectrodactyly etc.
Independently performs complex procedures and manages complex complications	Counsels families with limb deficiency syndromes on role of limb salvage versus amputation
Independently performs complex manipulative	a lidentified committee of the fact and when his an act to cost
casting and manages casting complications	 Identifies complex club foot and when/when not to cast Independently performs clubfoot casting and manipulative casting in complex clubfoot
	and/or syndromic clubfoot
Level 5 Develops a clinical pathway or guideline	Develop a clinical pathway to improve documentation of compliance with brace-wear for a
for the management of patients based on	patient with club foot
demonstrated clinical expertise	
·	
Independently performs advanced procedures	Independently performs revision clubfoot release
(e.g., revision clubfoot release)	
Assessment Models or Tools	Direct observation
	Multisource feedback
	Sawbone manipulative casting model

	2021.

Overall Intent: To identify, manage, and definitively treat pediatric hip pathology of varying complexities with appropriate work \-up and interventions including operative and non-operative methods	
Milestones	Examples
Level 1 Obtains a patient history, performs a physical examination, and develops a differential diagnosis for patients across clinical settings	 Obtains history including birth history and relevant risk factors for developmental dysplasia of the hip (DDH), slipped capital femoral epiphysis (SCFE), etc. Performs physical exam including Ortolani, Barlow maneuvers, and hip abduction Identifies femoral nerve palsy during Pavlik harness bracing
Demonstrates surgical skills, assists with procedures, and identifies complications	Correctly places a Pavlik harness
Level 2 Orders and interprets diagnostic testing and consultations based on patient evaluation	 Orders and interprets ultrasounds for DDH (including alpha angle) and radiographs when age appropriate Orders appropriate x-rays for SCFE (frog leg lateral) and evaluates skeletal age and risk factors for contra-lateral slip to determine role of prophylactic pinning
Performs routine/ percutaneous procedures and manages complications, with indirect supervision (e.g., closed reduction and spica casting for developmental dysplasia of the hip [DDH], performance and interpretation of hip arthrogram, percutaneous pinning of slipped capital femoral epiphysis [SCFE])	Performs hip arthrogram and interprets radiograph, performs closed reduction and casting for DDH, and percutaneously pin SCFE with indirect supervision
Level 3 Synthesizes a plan to manage patients with straightforward conditions, including non-operative options (e.g., casting, bracing)	 Counsels and develops appropriate follow-up plan for patient DDH including Pavlik harness wear, ultrasound, and routine follow-up Counsels and develops appropriate follow-up plan for SCFE including risk of contra-latera slip, development of avascular necrosis, etc.
Performs routine procedures (e.g., pinning) and manages complications, with oversight; performs complex procedures with indirect supervision (e.g., open reduction for DDH, proximal femoral osteotomy)	Performs open reduction for DDH and proximal femoral osteotomy with indirect supervision
Level 4 Synthesizes a comprehensive plan to manage patients with complex conditions and comorbidities, including non-operative options	 Develops a comprehensive plan to manage late presenting DDH requiring femoral and/or acetabular osteotomies Appropriately assesses adolescent/young adult hip with instability and/or impingement by obtaining appropriate history, physical exam, and imaging

Independently performs complex procedures and manages complex complications (e.g., acetabular osteotomies- Dega, Pemberton)	Performs acetabular osteotomies including Dega and Pemberton
Level 5 Develops a clinical pathway or guideline for the management of patients based on demonstrated clinical expertise	Develops a guideline for adolescent post-operative protocol for return to sports
Independently performs advanced procedures (e.g., Bernese periacetabular osteotomy, surgical hip dislocation, Modified Dunn, multiplanar corrective osteotomy – Imhauser)	Independently performs advanced hip reconstruction including Bernese periacetabular osteotomy, surgical hip dislocation, modified Dunn, and multiplanar corrective osteotomy (Imhauser)
Assessment Models or Tools	Direct observation
	Multisource feedback
Curriculum Mapping	
Notes or Resources	 Flynn JM, Sankar WN, Wiesel SW. Operative Techniques in Pediatric Orthopaedic Surgery. 2nd ed. Lippincott Williams & Wilkins; 2015. ISBN:978-1451193084. Patient Care 3: Lower Extremity Deformity Overall Intent: To identify lower extremity deformities and use proper radiograph and clinical analysis in both the skeletally mature and	
immature patient to develop operative and non-	operative plans Examples
Level 1 Obtains a patient history, performs a physical examination, and develops a differential diagnosis for patients across clinical settings	Assesses clinical limb alignment normal versus abnormal (genu varus/valgus, Q angle, leg-length discrepancy) Understands caregivers' concerns for visit
Demonstrates surgical skills and assists with procedures	Describes the concepts/procedures of guided growth, osteotomies, external versus internal fixation
Level 2 Orders and interprets diagnostic testing and consultations based on patient evaluation	Interprets three-joint standing x-rays including measurements of mechanical axis deviation, medial proximal tibial angle, etc.
Performs routine procedures and identifies complications, with indirect supervision	Performs guided growth procedures and assist with more complex osteotomies
Level 3 Synthesizes a plan to manage healthy patients with straightforward conditions, including non-operative options (e.g., casting, bracing)	Harmonizes information from history and physical, imaging, growth prediction to plan for when surgery should be performed versus bracing or observation
Performs routine procedures (e.g., epiphysiodesis), with indirect supervision; manages complications, with oversight; performs complex procedures (e.g., osteotomies +/- external fixation, lengthening nails), with indirect supervision	Performs procedures above and manages complications such as infection, over- correction
Level 4 Synthesizes a comprehensive plan to manage patients with complex conditions and comorbidities, including non-operative options	Understands how to manage long-term complications of guided growth, failed osteotomies
Independently performs complex procedures and manages complex complications	Plans for and performs multi-planar deformity correction due to complex pathology that was not properly treated previously
Level 5 Develops a clinical pathway or guideline for the management of patients based on demonstrated clinical expertise	Conducts research on a deformity cohort to increase understanding in the field

Independently performs advanced procedures,	Performs multi-segment, multi-planar deformity correction due to complex pathology that
including revisions/complications	was not properly treated previously
Assessment Models or Tools	Assessment of pre-operative planning/templating
	Direct observation

Template software such as Bone Ninja, Traumacad, etc

Patient Care 4: Spine Overall Intent: To understand the core principles of spine pathology and to guide patient management based on severity and skeletal	
maturity Milestones	Examples
Level 1 Obtains a patient history, performs a ohysical examination, and develops a differential diagnosis for patients across clinical settings Demonstrates surgical skills and assists with procedures	 Sees a 12-year-old female in office setting for scoliosis consultation Asks about menarche, family history of scoliosis, bowel/bladder function Performs appropriate physical exam including inspection, Adams forward bend, leg length discrepancy, and neurological exam Understands the various types of scoliosis (congenital, neuromuscular, syndromic, adolescent idiopathic, juvenile, early onset) and describes them to caregiver in non-medical jargon Understands posterior approach to the spine if surgery is indicated
Level 2 Orders and interprets diagnostic testing and consultations based on patient evaluation	 Orders appropriate films to evaluate for scoliosis and to assess bone age (hand xray, pelvis); measures Cobb angles Understands need for advanced imaging (bending films, magnetic resonance imaging [MRI], computerized tomography [CT]) in appropriate patient
Performs routine procedures and identifies complications, with direct supervision	Performs exposure to posterior spine including localizing vertebral levels prior to incision
Level 3 Synthesizes a plan to manage healthy patients with straightforward conditions, including non-operative options (e.g., bracing, casting, physical therapy)	Harmonizes history and physical, imaging, and growth determination to suggest appropriate therapy and follow-up, which may include observation, serial x-rays, bracing, therapy, nutritional supplementation, surgical intervention
Performs routine procedures (e.g., pedicle screw nsertion, vertical expandable prosthetic titanium rib [VEPTR] lengthening), with indirect supervision; manages complications, with oversight; performs complex procedures with indirect supervision	 Performs above exposure and places routine pedicle screws; performs growing instrumentation lengthening Identifies intra-operative complications (dural tear); manages simple post-operative complications (dural tear, seromas) Assists with growing instrumentation insertion
Level 4 Synthesizes a comprehensive plan to manage patients with complex conditions and comorbidities, including non-operative options	Understands non-adolescent idiopathic scoliosis (neuromuscular, congenital, and syndromic scoliosis) and severe scoliosis requiring pre-operative or intra-operative traction
ndependently performs complex procedures and manages complex complications	 Performs above procedures with rod insertion and deformity correction Performs procedures of non-routine adolescent idiopathic scoliosis or other scoliosis

demonstrated clinical expertise

Patient Care 5: Trauma Overall Intent: To identify, stabilize, and definitively treat traumatic injuries in patients using operative and non-operative techniques	
Milestones	Examples
Level 1 Obtains a patient history, performs a physical examination, and develops a differential diagnosis for patients across clinical settings	 Obtains a pertinent history to the injury and conducts an extremity-specific exam based on that history Synthesizes this information and forms an appropriate differential diagnosis
Demonstrates surgical skills, performs reduction and casting, assists with procedures, and identifies complications	 Applies a holding cast with good technique with appropriate cast index/three-point mold Safely splits casts without causing thermal injury
Level 2 Orders and interprets diagnostic testing and consultations based on patient evaluation	Obtains and reviews appropriate imaging and uses this information to perform an appropriate closed reduction with immobilization
Performs routine procedures (e.g., closed reduction and percutaneous pinning), cast wedging/adjustments, and manages complications, with indirect supervision	 Performs straightforward closed reduction and percutaneous pinning of a supracondylar humerus fracture Identifies fractures amenable to cast wedging and performs this technique appropriately with an acceptable outcome
Level 3 Synthesizes a plan to manage healthy patients with straightforward conditions, including operative and non-operative options	 Identifies femur fractures in children younger than three years as suspicious for abuse or neglect Diagnoses and appropriately determines and performs surgical management for Monteggia fractures with indirect supervision Diagnoses and manages a post-operative septic elbow after a percutaneous pinning Sets up fracture table and positions fluoroscopy monitor
Performs routine procedures and manages complications, with oversight; performs complex procedures, with indirect supervision (e.g., open reduction of supracondylar humerus, open reduction of articular fractures)	 Performs flexible or rigid nailing of long bones with indirect supervision Applies spica cast for toddler's femur fracture
Level 4 Synthesizes a comprehensive plan to manage patients with complex conditions and comorbidities, including operative and non-operative options	Places temporary external fixation to stabilize open fracture and plans definitive surgery
Independently performs complex procedures and manages complex complications (e.g.,	Manages femur fracture in patient with atypical bone such as osteogenesis imperfecta, fibrous dysplasia, or cerebral palsy

staged treatment of open fractures, lawn mower	Stabilizes multiple fractures in patient with polytrauma
injuries)	Performs a physeal bar resection and interposition graft
Level 5 Develops a clinical pathway or guideline for the management of patients based on demonstrated clinical expertise	Corrects malunion using multiplanar external fixation
Independently performs advanced procedures (e.g., operative management of fracture nonunion)	Performs pelvic reduction and fixation
Assessment Models or Tools	Direct observation
	Pre- and/or post-operative conference
	Pre-operative templating/planning
Curriculum Mapping

Patient Care 6: Neuromuscular Overall Intent: To develop safe, rational, multidisciplinary treatment plans for patients with neuromuscular conditions	
Milestones	Examples
Level 1 Obtains a patient history, performs a	• Identifies regions of spasticity on a physical exam and correlates them with type(s) of
physical examination, and develops a differential	cerebral palsy
diagnosis for patients across clinical settings	Differentiates between motion limitations due to spasticity versus contractures (recommend using "joint level impairment" rather than "motion limitation")
Demonstrates surgical skills, assists with	Demonstrates basic knowledge of bracing interventions
procedures, and identifies complications	Performs tendon lengthening
Level 2 Orders and interprets diagnostic testing and consultations based on patient evaluation	Orders appropriate lower-extremity bracing for the treatment of joint-level impairment and gait deviation
	Orders spine and hip surveillance films at appropriate intervals
Performs routine procedures and manages complications, with indirect supervision	Performs tendon transfers
Level 3 Synthesizes a plan to manage patients	Anticipates impact of spasticity on outcomes
with straightforward conditions, including	 Performs tendon transfers in conjunction with osteotomies Anticipates post-operative medical complications and contributes to interdisciplinary
operative and non-operative options (e.g., injections, casting, bracing)	management
Performs routine procedures and manages	Uses motion analysis to identify gait deviations and compensations
complications, with oversight; performs complex procedures, with indirect supervision	Develop treatment plans considering patients' Gross Motor Function Classification System (GMFCS) Level
Level 4 Synthesizes a comprehensive plan to	Creates a pre-operative plan to include consideration of spasticity management
manage patients with complex conditions and comorbidities, including operative and non-	
operative options (e.g., addresses multi-level	
problems simultaneously)	
Independently performs complex procedures and manages complex complications	 Performs all parts of single-event multilevel surgery procedures Manages reported complications associated with bone and soft tissue surgery (loss of proximal femoral fixation, failure of patellar tendon advancement) Creates a post-operative rehabilitation plan to include activity progression and bracing

Level 5 Develops a clinical pathway or guideline for the management of patients based on demonstrated clinical expertise	Implements multidisciplinary pre- and post-operative pathways for the care of the pediatric neuromuscular patient
Independently performs advanced procedures	• Independently performs revision surgery for the treatment of the painful spastic dislocated hip
Assessment Models or Tools	Direct observation
	Multisource feedback
	Patient conference presentation

for both manipulative casting and surgical techn Milestones	Examples
Level 1 Demonstrates knowledge of physiologic anatomy and interprets imaging	When evaluating a new patient with foot pain, correctly identifies location of pain and describes foot position appropriately – equinus/calcaneus, hindfoot varus/valgus, pes planus/cavus, adductus and orders appropriate x-rays
Demonstrates basic knowledge of surgical and non-surgical interventions	When a newborn presents with club foot, understands the role of manipulative casting and role for surgical intervention following relapse
Level 2 Demonstrates knowledge of basic therapeutic approaches based on foot pathology	For a three-year-old patient with a history of clubfoot, understands indication for tibialis anterior transfer
Discusses indications and contraindications to surgical and non-surgical interventions	For a cavovarus foot deformity, identifies flexible and rigid deformity and discusses the indications and contraindications for soft tissue versus bony reconstruction
Level 3 Correlates imaging to anatomy and selects treatment	Interprets x-rays and advanced imaging (CT scan) when necessary to determine appropriate surgical intervention for a symptomatic tarsal coalition
Demonstrates knowledge of the risks and benefits for surgical and non-surgical interventions	• For a three-year-old male with recurrent clubfoot, discusses risks and benefits of surgical intervention as well as manipulative casting (e.g., pressure sores) and understands the paradigm shift from early surgical intervention to manipulative casting in clubfoot management and cast complications (pressure sores)
Level 4 Demonstrates knowledge of advanced therapeutic approaches based on foot pathology	For a seven-year-old male with recurrent clubfoot, understands advanced surgical options including circumferential releases, midfoot wedge osteotomies and fusion
Anticipates long-term sequela of surgical and non-surgical interventions	Counsels family members appropriately about the natural history of clubfoot, risk of recurrence, and brace management in clubfoot, and develops a long-term follow-up plan
Level 5 Leads advanced discussion at a multidisciplinary conference and/or in operating room	Presents at a national meeting
Assessment Models or Tools	Direct observation Radiographic interpretation
Curriculum Mapping	•

 2021.

	Medical Knowledge 2: Hip Pathology
Overall Intent: To identify hip pathology in the pediatric patient with use of various radiographic and clinical assessment tools to guide	
treatment plans based on age and degree of dy Milestones	spiasia Examples
Level 1 Demonstrates knowledge of pathologic	When a three-week-old baby girl presents to office after breech presentation:
anatomy and interprets imaging	 Asks about birth history, family history, other risk factors for DDH Performs physical exams including Barlow, Ortolani, Galeazzi, and range of motion Assesses baby for associated conditions (torticollis, foot deformity, spine deformity)
Demonstrates basic knowledge of surgical and non-surgical interventions	 Describes normal and pathologic anatomy seen on imaging including alpha angle, femoral head coverage, Shenton's line, Perkin's Line, Hilgenreiner's Line, Describes treatment forecast including Pavlik, Rhino bracing, closed reduction, arthrogram, spica, and open reduction
Level 2 Correlates imaging to development and hip pathology	Understands difference between hip ultrasound and x-ray and when to use them
Discusses indications and contraindications to surgical and non-surgical interventions	Discusses interventions above based on specific patient case (age at presentation, ability to reduce hip, other comorbidities)
Level 3 Demonstrates knowledge of basic	Discusses an anterior approach, medial approach to open reduction
therapeutic approaches based on hip pathology	Assesses appropriate reduction parameters and stability (interprets arthrogram, CT/MRI)
Demonstrates knowledge of the risks and benefits for surgical and non-surgical interventions	 Understands the risk of complications based on hip position in spica casting Discharges with appropriate safety parameters given a spica cast
Level 4 Demonstrates knowledge of advanced therapeutic approaches based on hip pathology	Describes complex reconstruction procedures, including femoral and acetabular osteotomies
Anticipates long-term sequela of surgical and non-surgical interventions	Understands indications and treatment for older patients with neglected DDH (periacetabular osteotomy, etc.)
Level 5 Leads advanced discussion at a multidisciplinary conference and/or in operating room	Submits a paper/poster/podium presentation on hip pathology
Assessment Models or Tools	Direct observation
	Radiographic interpretation
	 Sawbones Training model Ultrasound interpretation with or without performing the ultrasound

Medical Knowledge 3: Lower-Extremity Deformity Overall Intent: To understand physiologic and pathologic lower-extremity alignment and the appropriate evaluation and treatment of deformities	
Milestones	Examples
Level 1 Demonstrates knowledge of anatomy and interprets imaging (e.g., normal development lower extremity alignment – genu valgum/varum, Blounts, Ricketts)	 Interprets limb alignment films in a child presenting for evaluation of deformity, including physiologic genu yalgum/varum, Blount's disease, and rickets Evaluates toddler for in-toeing and identifies femoral anteversion, tibial torsion, and metatarsus adductus as potential sources
Demonstrates basic knowledge of surgical and non-surgical interventions	Demonstrates knowledge of guided growth and osteotomies
Level 2 Correlates imaging to development and lower extremity deformity (e.g., interpretation of limb alignment films and determining bone age)	 Further interprets limb alignment films, including mechanical axis and measurement of joint alignment angles Orders and interprets bone age films
Discusses indications and contraindications to surgical and non-surgical interventions	Evaluates adolescent with pathologic genu valgum and estimates growth remaining to determine if patient is a candidate for guided growth versus osteotomy
Level 3 Demonstrates knowledge of basic therapeutic approaches based on lower extremity deformity (e.g., bracing/orthotics, guided growth, osteotomies)	Understands role of bracing/orthotics in lower-extremity deformity
Demonstrates knowledge of the risks and benefits for surgical and non-surgical interventions	Discusses the risks of guided growth including anticipating rebound and/or need for overcorrection based on diagnosis
Level 4 Demonstrates knowledge of advanced therapeutic approaches based on lower extremity deformity (e.g., multi-planar frames, internal lengthening devices)	Evaluates adolescent with multi-planar deformity and understands indication for multi- planar frames and internal lengthening devices
Anticipates long-term sequela of surgical and non-surgical interventions	Understands risks of limb lengthening procedures (joint subluxation, neurovascular) and develops appropriate intra-operative and follow-up plans to avoid these risks
Level 5 Leads advanced discussion at a multidisciplinary conference and/or in operating room	Presents grand rounds or resident lecture on evaluation of lower-extremity deformity and treatment options
Assessment Models or Tools	Direct observation

	Radiographic interpretation
Curriculum Mapping

Medical Knowledge 4: Spine	
Overall Intent: To understand the pathophysiology of spine disorders to describe proper treatment plans for various pediatric patients	
Milestones	Examples
Level 1 Demonstrates knowledge of anatomy and interprets imaging	A 12-year-old female presents to office for scoliosis consultation:
Demonstrates basic knowledge of surgical and non-surgical interventions	 Measures some form of skeletal maturity/growth prediction (Risser, Sanders) Understands concepts of bracing and therapy versus spinal fusion
Level 2 Demonstrates knowledge of	Correlates Cobb angle to physical exam and develops appropriate treatment plan
pathoanatomy and correlates with imaging	Combines spinal imaging with growth prediction to execute treatment plan as above
Discusses indications of surgical and non- surgical interventions	Discusses proper brace wear, type of physical therapy, posterior spinal fusion
Level 3 Demonstrates knowledge of basic therapeutic techniques (e.g., posterior sacroiliac fusion [PSIF])	Discusses PSIF and common complications of the procedure, including dural tears, wound infection, and neurological injury
Demonstrates knowledge of the risks and benefits for surgical and non-surgical interventions	Discusses risks and complications of not treating scoliosis, including progression of curve, cosmetic deformity, pulmonary function
Level 4 Demonstrates knowledge of advanced therapeutic techniques (e.g., tethering, growing instrumentation)	Understands more advanced surgical interventions: anterior tethering, growing instrumentation and Mehta casting for early-onset scoliosis, halo traction for severe deformities
Anticipates long-term sequela of surgical and non-surgical interventions	Describes long-term complications: failure of fusion, proximal junctional kyphosis, need for revision, progression into adult deformity
Level 5 Leads advanced discussion at a multidisciplinary conference and/or in operating room	Submits a paper/poster/podium presentation on pediatric spine disorders
Assessment Models or Tools	Direct observation
	Journal club
Coming them Managing	Radiographic exercise

Medical Knowledge 5: Trauma Overall Intent: To identify mechanism, severity, and treatment options for traumatic injuries to limit morbidity and maximize function	
Milestones	Examples (1) (1) (1) (1) (1) (1) (1) (1) (1) (1)
Level 1 Demonstrates knowledge of developmental anatomy and interprets imaging	Accurately associates mechanisms of elbow trauma to clinical and radiographic injury
Demonstrates basic knowledge of surgical and non-surgical interventions	Accurately associates proximal femoral vascular anatomy and risks of femoral nailing
Level 2 Correlates imaging to development and pathology (e.g., normal physes versus fractures)	Accurately correlates elbow epiphyseal appearance with patient age
Discusses indications and contraindications to surgical and non-surgical interventions	Discusses the severity of supracondylar humerus fractures and identifies which fractures will benefit from operative intervention and which may be better treated with non-operative intervention
Level 3 Demonstrates knowledge of basic therapeutic approaches based on pathology (e.g., treatment options based on age, size, and remodeling potential)	Identifies treatment options based on age and remodeling potential, e.g., understands acceptable angulation of a long-bone fracture based on age and growth remaining
Demonstrates knowledge of the risks and benefits for surgical and non-surgical interventions	Identifies likely outcome for both operative and non-operative management of different types of fractures and discusses this with the patient and family members
Level 4 Demonstrates knowledge of advanced therapeutic approaches based on pathology	Teaches a resident about treatment for multiplanar complex fractures, such as a triplane ankle
(e.g., physeal bar excision indications)	 Understands when a physeal bar excision is or is not indicated based on the severity of the bar and remaining growth
Anticipates long-term sequela of surgical and non-surgical interventions	Anticipates sequela of physeal damage and the potential for future deformity
Level 5 Leads advanced discussion at a multidisciplinary conference and/or in operating room	 Provides a grand rounds-type presentation about a pediatric-specific fracture discussing treatment options and long-term outcomes; can lead a question-and-answer session related to that topic Presents paper/poster at national meeting
Assessment Models or Tools	Direct observation
A COSCINION CHICAGO OF TOOLS	Pre-/post-operative conference
Curriculum Mapping	•

Medical Knowledge 6: Neuromuscular		
Overall Intent: To identify key features of neuromuscular conditions and understand the natural history and treatment options/indications to maximize function		
Milestones	Examples	
Level 1 Demonstrates knowledge of pathologic anatomy and interprets imaging Demonstrates basic knowledge of surgical and non-surgical interventions	 Classifies a patient with cerebral palsy based on anatomic distribution of pathology, type of motor involvement and functional impairment Understands indications for hip surveillance Discusses bracing and surgical interventions for gastrocnemius spasticity and contractures 	
Level 2 Correlates imaging to development and pathology (e.g., interpretation of hip radiographs) Discusses indications and contraindications to surgical and non-surgical interventions (e.g., identifies "hips at risk")	 Measures migration percentage and identifies the hip at risk Identifies all components of crouch gait Interpretation of hip radiographs including identifying pertinent abnormalities and normal anatomic variation 	
Level 3 Demonstrates knowledge of basic therapeutic approaches based on pathology (e.g., describes options for hip preservation versus hip salvage)	 Correctly identifies patients indicated for surgical intervention of hip subluxation and discusses risks and benefits of soft tissue procedures versus bony intervention Orders and interprets films as apart of non-surgical and surgical planning for gait abnormalities (analysis of the elements of crouch gait and neuromuscular flat foot) 	
Demonstrates knowledge of the risks and benefits for surgical and non-surgical interventions	Identifies medical comorbidities (malnutrition, compromised respiratory status, chronic constipation) that increase risk of surgical intervention	
Level 4 Demonstrates knowledge of advanced therapeutic approaches based on multiple diagnostic modalities (e.g., gait analysis: recognizes gait deviations requiring treatment and differentiates these from compensations)	 Correctly identifies risks and benefits of complex surgical intervention for hip subluxation and dislocation with consideration of age, severity, and functional level Uses the results of gait analysis (if applicable), physical examination, and imaging to create non-surgical interventions and plans for multilevel surgery Identifies joint level impairments and their contributions to gait deviations 	
Anticipates long-term sequela of surgical and non-surgical interventions	Understands the impact of single-event multilevel surgery procedures on return to pre- operative levels	
Level 5 Leads advanced discussion at a multidisciplinary conference and/or in operating room	 Independently interprets gait analysis studies (if applicable) and creates appropriate non-operative and operative plans accordingly Leads discussion among multiple medical and surgical specialties to optimize the perisurgical care of the neuromuscular patient 	

Assessment Models or Tools	Direct observation
	Multisource feedback
	Patient conference presentations

families, and health care professionals; to cond Milestones	Examples
Level 1 Demonstrates knowledge of common patient safety events	 Lists patient misidentification or medication errors as common patient safety events Identifies medication safety issues in regard to pediatric dosing guidelines Describes how to report errors in the local clinical environment
Demonstrates knowledge of how to report patient safety events	Knows the systems process for communicating potential medication errors
Demonstrates knowledge of basic quality improvement methodologies and metrics	• Summarizes common home issues: stairs to navigate post-operation, need for further equipment, shower chair, commode, etc.
Level 2 Identifies system factors that lead to patient safety events	 Identifies systems factors leading to errors through the multidisciplinary conferences Correctly applies a Plan Do Study Act (PDSA) QI project to help eliminate common
Reports patient safety events through institutional reporting systems (simulated or actual)	medication errors in the pediatric population
Describes local quality improvement initiatives	Describes root cause analysis process
Level 3 Participates in analysis of patient safety events (simulated or actual)	Prepares for morbidity and mortality (M and M) presentations
Participates in disclosure of patient safety events to patients and patients' families (simulated or actual)	Communicates, under supervision, with caregivers about a medication error
Participates in local quality improvement initiatives	Participates in protocol with risk management to disclose medication errors
Level 4 Conducts analysis of patient safety events and offers error prevention strategies (simulated or actual)	Participates in a QI project to decrease medication error within the pediatric population
Discloses patient safety events to patients and patients' families (simulated or actual)	Communicates with caregivers about a medication error

Demonstrates the skills required to identify,	Discusses the analysis of a QI project
develop, implement, and analyze a quality	
improvement project	
Level 5 Actively engages teams and processes to modify systems to prevent patient safety events	Assumes a leadership role at the departmental or institutional level for patient safety
Role models or mentors others in the disclosure of patient safety events	Conducts a simulation for disclosing patient safety events
Creates, implements, and assesses quality improvement initiatives at the institutional or community level	Leads a multidisciplinary QI project
Assessment Models or Tools	Direct observation
	E-module multiple choice tests
	Hospital safety report audit
	Multisource feedback
	Presentations (M and M, QI)
	Reflection
	Simulation

Systems-Based Practice 2: System Navigation for Patient-Centered Care		
Overall Intent: To effectively navigate the health care system, including the interdisciplinary team and other care providers, to adapt care to		
a specific patient population to ensure high-quality patient outcomes		
Milestones	Examples	
Level 1 Demonstrates knowledge of care coordination	• Identifies the caregiver, pediatrician, social worker, physical therapists as members of the team	
Identifies key elements for safe and effective transitions of care and hand-offs	• Lists follow-up of labs, testing, new medications, and consults as essential components of a sign-out	
Level 2 Coordinates care of patients in routine clinical situations effectively using the roles of the interprofessional team members	Coordinates transition of care with home care or rehabilitation facility at the time of discharge from the hospital	
Performs safe and effective transitions of care/hand-offs in straightforward clinical situations	Uses a systematic institutional process during routine sign-out	
Level 3 Coordinates care of patients in complex clinical situations effectively using the roles of interprofessional team members	Coordinates complex care with the social worker for a pediatric patient who lives in a shelter with care giver to ensure appropriate medical aftercare	
Performs safe and effective transitions of care/hand-offs in complex clinical situations	Uses institutional protocol when transferring a complex patient to the intensive care unit	
Level 4 Role models effective coordination of patient-centered care among multidisciplinary team members	Leads team members during inpatient rotations in appropriate consultation with care coordination in disposition of pediatric patient who lives in a shelter with mobility impairment	
Role models and advocates for safe and effective transitions of care/hand-offs	Plans for cross-coverage in case of unanticipated absence of a team member	
Level 5 Analyzes the process of care coordination and leads in the design and implementation of improvements	Creates a multidisciplinary meeting/complex care group to better manage pediatric patients with multiple medical problems	
Improves quality of transitions of care within and across health care delivery systems to optimize patient outcomes	Develops a protocol (care pathways for various orthopaedic conditions) to streamline complex care coordination	
Assessment Models or Tools	Direct observationMultisource feedback	

	 Objective structured clinical examination (OSCE) Quality metrics and goals mined from electronic health records (EHR) Review of sign-out tools, use and review of checklists
Curriculum Mapping	•

Systems-Based Practice 3: Physician Role in Health Care Systems		
Overall Intent: To understand the physician's role in the complex health care system and how to operate effectively within the system to		
improve patient care		
Milestones	Examples	
Level 1 Describes basic health payment systems, including government, private, public, and uninsured care, as well as different practice models	 Understands the difference between Medicaid, managed Medicaid, private insurance Takes into consideration patient's insurance limitations when presenting certain treatment plans (orthotic devices, physical therapy) 	
Level 2 Describes how working within the health care system impacts patient care, including billing and coding	Identifies coding requirements for clinical documentation Explains that improving patient satisfaction potentially improves patient compliance	
Level 3 Analyzes how personal practice affects the system (e.g., length of stay, readmission rates, clinical efficiency)	 Ensures compliance with care pathways to optimize length of stay Understands the role of patient education in decreasing readmission rates 	
Level 4 Uses shared decision-making in patient care, taking into consideration costs to the patient	 Ensures proper documentation of qualifying hospital stay prior to discharging a patient to a skilled nursing facility for physical therapy Works collaboratively to improve patient assistance resources for a patient with limited resources Tailors treatment decisions to patient resources/insurance status (e.g., prescribing a brace versus applying a splint) 	
Level 5 Participates in advocacy activities for health policy	 Works with community or professional organizations to advocate for playground equipment/ park safety measures Improves informed consent process for non-English-speaking patients requiring interpreter services Performs clinical research that affects health care disparities Participates in a peer-to-peer review for insurance approval 	
Assessment Models or Tools	 Direct observation Medical record (chart) audit Patient satisfaction data Portfolio

Practice-Based Learning and Improvement 1: Evidence-Based and Informed Practice Overall Intent: To incorporate evidence and patient values into clinical practice	
Overall intent. To incorporate evidence and patient values into clinical practice	
Milestones	Examples
Level 1 Demonstrates how to access and use available evidence, and incorporate patient preferences and values to the care of straightforward conditions	Compares evidence-based guidelines and literature review for treatment of developmental dysplasia of the hip (including Pavlik harness treatment and abduction bracing) and incorporates the patient's preference for treatment while communicating and understanding options
Level 2 Articulates clinical questions and elicits patient preferences and values to guide evidence-based care	 Identifies and discusses potential evidence-based treatment options for a patient with a delayed diagnosis of hip dysplasia and/or failure of harness treatment solicits parent perspective
Level 3 Locates and applies the best available evidence, integrated with patient preference, to the care of complex conditions	 Obtains, discusses, and applies evidence for the treatment of a patient with hip dysplasia and underlying medical comorbidities (e.g., teratologic hip dislocation, hip dysplasia in children with neuromuscular conditions and myelomenigocele) Understands and appropriately uses clinical practice guidelines in making patient care decisions while eliciting patient preferences for operative versus non-operative treatment
Level 4 Critically appraises and applies evidence, even in the face of uncertainty and conflicting evidence, to guide care tailored to the individual patient	Accesses the primary literature to address controversies in the evolving field of hip preservation and the management of hip dysplasia in the adolescent/young adult
Level 5 Coaches others to critically appraise and apply evidence for complex conditions, and/or participates in the development of guidelines	 Leads clinical discussion on application of evidence-based practice for treatment of developmental hip dysplasia Develops a DDH ultrasound screening program in accordance to American Academy of Pediatrics guidelines
Assessment Models or Tools	 Core conference participation Direct observation Oral or written examinations Presentation evaluation

Professiona	alism 1: Professional Behavior and Ethical Principles
Overall Intent: To recognize and address lapses in ethical and professional behavior, demonstrates ethical and professional behaviors, and	
use appropriate resources for managing ethical and professional dilemmas	
Milestones	Examples
Level 1 Identifies and describes inciting events for professionalism lapses	Identifies fatigue, illness, increased substance/alcohol use and unmanaged stress as contributing factors to professional lapses
Demonstrates knowledge of the ethical principles underlying patient care (e.g., informed consent, surrogate decision making, advanced	 Relates the importance of patient autonomy as it relates to informed consent including the role of surrogates and advance directives Understands the impact of disclosing errors in patient care and loss of patient
directives, confidentiality, error disclosure, stewardship of limited resources, and related topics)	confidentiality
Level 2 Demonstrates insight into professional behavior in straightforward situations	Understands perceptions created by tone of voice, timing/place of feedback within the health care team during daily patient care activities
Applies ethical principles in straightforward	Notifies appropriate people of personal mistakes; does not make excuses
situations and takes responsibility for lapses	 Accepts responsibility when supervising residents who do not provide appropriate instruction to learners (e.g., wrong labs, splint)
Level 3 Demonstrates professional behavior in complex situations (e.g., patient refusing	Does not attribute blame when discussing adverse outcome with family members or the patient
treatment, impaired physicians, patients with limited decision-making capacity)	Uses respectful, unemotional communication in discussions when resolving conflict within health care team
	Elevates concerns for inappropriate racial or gender microaggressions to appropriate supervisor.
Integrates ethical principles and recognizes the need to seek help in complex situations	Notifies site director or appropriate supervisor after noticing a colleague seems to be impaired
Level 4 Recognizes situations that may promote professionalism lapses and intervenes to	Acts in patient's best interest when collaborating with other health care services to determine appropriate admission service
prevent lapses in oneself and others	Responds to inappropriate racial or gender microaggressions using Bystander Intervention techniques
Recognizes and uses appropriate resources for managing and resolving ethical dilemmas (e.g., ethics consultations, literature review, risk management/legal consultation)	Elevates issues regarding end-of-life decisions to appropriate channels when family or other conflict is evident (e.g., Ethics Committee, legal counsel, risk management)

Level 5 Coaches others when their behavior fails to meet professional expectations	 Chooses appropriate setting and tone in discussions with others regarding suboptimal professional behavior Coaches others on bystander intervention skills in response to racial and sexual harassment
Identifies and seeks to address system-level factors that induce or exacerbate ethical problems or impede their resolution Assessment Models or Tools	 Recognizes source of repetitive conflict between members of health care team and recommends institutional policy to resolve Devises materials to aid others in learning to provide informed consent Direct observation Global evaluation
Oursianthus Manaina	 Multisource feedback Oral or written self-reflection Simulation

--

Professionalism 2: Accountability/Conscientiousness Overall Intent: To take responsibility for one's own actions and the impact on patients and other members of the health care team	
Milestones	Examples
Level 1 Reliably arrives to clinical activities on time and describes strategies for ensuring timely task completion	Completes work hour logs promptly and accurately Exhibits punctuality in conference attendance Completes documentation in the medical record in a timely and accurate manner
Responds promptly to requests or reminders to complete tasks and responsibilities	Completes end-of-rotation evaluations
Level 2 Performs tasks and responsibilities in a timely manner with appropriate attention to detail in straightforward situations	Completes administrative tasks, documents safety modules, procedure review, and licensing requirements by specified due date
Completes tasks and responsibilities without reminders	Completes tasks before going out of town in anticipation of lack of computer access while traveling
Level 3 Prioritizes tasks and responsibilities in a timely manner with appropriate attention to detail in complex situations	Notifies attending of multiple competing demands on call, appropriately triages tasks, and asks for assistance from other residents or faculty members as needed
Proactively completes tasks and responsibilities to ensure that the needs of patients, teams, and systems are met	Arranges coverage for assigned clinical tasks in preparation for being out of the office to ensure appropriate continuity of care
Level 4 Recognizes barriers that may impact one's own and others' ability to complete tasks and responsibilities in a timely manner	 Recognizes and works to improve personal deficiencies in communication (verbal and electronic documentation) with team members about patient care needs Recognizes when multiple residents are unavailable, the outpatient clinic will be negatively affected and appointments delayed
Level 5 Develops processes to enhance one's own and other's ability to efficiently complete patient care tasks and responsibilities	Leads interdisciplinary team to identify problems and specific solutions to develop a process to streamline patient discharges
Assessment Models or Tools	 Compliance with deadlines and timelines Direct observation Global evaluations Multisource feedback Self-evaluations and reflective tools Simulation
Curriculum Mapping	

Notes or Resources	• AMA. Ethics. https://www.ama-assn.org/delivering-care/ama-code-medical-ethics . 2021.

	https://www.aaos.org/about/bylaws-policies/ethics-and-professionalism/code/. 2021.
	Code of conduct from fellow/resident institutional manual
	Expectations of residency program regarding accountability and professionalism

Professionalism 3: Well-Being Overall Intent: To identify, use, manage, improve, and seek help for personal and professional well-being for self and others	
Milestones	Examples
Level 1 Recognizes the importance of addressing personal and professional well-being	Acknowledges own response to patient's poor outcome Receives feedback on missed emotional cues after a family meeting
(e.g., physical and emotional health, burnout)	, , , , ,
Level 2 Lists available resources for addressing personal and professional well-being	Independently identifies and communicates impact of a personal problem
Describes institutional resources meant to promote well-being	Can identify graduate medical education counseling services, suicide hotline, and well-being committee representatives available at the institution
Level 3 Discusses a plan to promote personal and professional well-being with institutional support	Develops a reflective response to deal with the personal impact of difficult patient encounters and disclosures with the interdisciplinary team
Recognizes which institutional factors affect well-being	Identifies faculty mentors
Level 4 Independently develops a plan to promote personal and professional well-being	 Identifies ways to manage personal stress and responses to unexpected patient outcomes, independently Discusses useful strategies to improve work-life balance
Describes institutional factors that positively and/or negatively affect well-being	
Level 5 Creates institutional level interventions	 Identifies initiatives within the fellowship program to improve well-being Assists in organizational efforts to address clinician well-being after patient
that promote colleagues' well-being	diagnosis/prognosis/death
Describes institutional programs designed to examine systemic contributors to burnout	Implements a lasting initiative to improve learner well-being within the program
Assessment Models or Tools	 Direct observation Group interview or discussions for team activities Individual interview
	 Institutional online training modules Self-assessment and personal learning plan
Curriculum Mapping	
Notes or Resources	• This subcompetency is not intended to evaluate a fellow's well-being, but to ensure each fellow has the fundamental knowledge of factors that impact well-being, the mechanisms

- by which those factors impact well-being, and available resources and tools to improve well-being.

Interpersonal and Comp	nunication Skills 1: Patient- and Family-Centered Communication
taran da antara da a	nd behaviors to form constructive relationships with patients and family; identify
, , , , , , , , , , , , , , , , , , , ,	ases, diversity, and health care disparities while respecting patient autonomy in
communications; organize and lead communica	ition around shared decision making
Milestones	Examples
Level 1 Demonstrates respect and establishes rapport with patient and caregiver(s) (e.g., situational awareness of language, disability, health literacy level, cultural differences)	 Introduces self, other health care professionals, faculty member with appropriate titles; identifies patient and others in the room; and engages all parties in health care discussions with sensitivities to patient and family dynamics
Communicates with patients and patient's caregiver(s) in an understandable and respectful manner	Identifies need for trained interpreters with non-English-speaking patients Uses age-appropriate and health literacy-appropriate language
Demonstrates basic understanding of informed consent process	Outlines basic risks, benefits, and alternatives to surgery
Level 2 Establishes a therapeutic relationship in straightforward encounters	Avoids medical jargon and restates patient/caregiver perspective when discussing a diagnosis and treatment options
Identifies barriers to effective communication (e.g., health literacy, cultural differences)	 Uses patient/caregiver-centered communication when answering questions during the informed consent process Recognizes the need for handouts with diagrams and pictures to communicate information to a patient/caregiver who is unable to read
Answers questions about straightforward treatment plans, with assistance	 Discusses risks, benefits, and alternatives of procedure and consults attending or an attending if questions arise that are beyond the fellow's knowledge base Uses of receptive body language, eye contact, and posture
Level 3 Establishes a therapeutic relationship in challenging encounters (e.g., shared decision making)	Acknowledges a patient/caregiver's request for an inappropriate diagnostic study or treatment modality and respectfully redirects and initiates a treatment plan using only appropriate studies/treatments
When prompted, reflects on personal biases while attempting to minimize communication barriers	 Modifies a treatment plan to better suit the needs of a patient and family (e.g., other children, caregiver job status, major life events) Respects caregivers' opinions regarding how much information patient is given regarding procedure even if physician disagrees with this philosophy

Counsels the patient and patient's caregiver(s) through decision-making process for straightforward conditions	 Discusses indications, risks, benefits, and alternatives during informed consent for a discussion of expected post-operative outcomes, rehab, etc. Recognizes potential personal biases when providing care
Level 4 Facilitates difficult discussions to patients and caregiver(s) (e.g., explaining complications, therapeutic uncertainty)	Counsels representative family members in the care of a patient with complex pathology when most will not be familiar with post-operative care
Recognizes biases and integrates the patient's and patient's caregiver(s)'s viewpoints and autonomy to ensure effective communication	Discusses holistic importance of pediatric orthopedic care to ensure best surgical outcomes and manage realistic expectations of patient and caregivers
Counsels patient and their caregiver through decision-making process for complex conditions	Obtains a consent in emergent situations in when caregiver may not be present
Level 5 Coaches others in the facilitation of difficult conversations	Leads residents in process for obtaining consent for a pediatric procedure from appropriate legal guardian
Mentors others in situational awareness and critical self-reflection	 Encourages others to understand the importance of taking extra time with pediatric patients and caregivers to ensure communication is complete Observes interactions between more junior residents and patients and offers constructive feedback Serves on a hospital bioethics committee
Counsels the patient and patient's caregiver(s) through decision-making process for uncommon conditions	 Develops supplemental materials to better inform patients prior to routine pediatric procedures Counsels patient's family about treatment options for a congenital deformities
Assessment Models or Tools	 Direct observation Self-assessment including self-reflection exercises Simulation Standardized patients

--

taran da antara da a	munication Skills 2: Interprofessional and Team Communication
in both straightforward and complex situations	n the health care team, including other care providers, staff members, and ancillary personnel,
Milestones	Examples
Level 1 Recognizes the value and role of each team member and respectfully interacts with all members of the health care team	 Answers questions respectfully and patiently for radiology tech regarding x-ray orders understanding that the radiology tech plays in important role in care of the orthopaedic patient Receives an emergency department consult for a simple fracture and respectfully takes the patient information Accepts nursing staff suggestions and responds to their concerns respectfully
Level 2 Communicates in a professional and productive manner to facilitate teamwork (e.g., active listening, updates in timely fashion)	 Communicates with the radiology tech the need for specialized x-ray views in an unstable fracture and assists with limb positioning if requested by the tech Communicates with the emergency department physician a diagnosis of evolving compartment syndrome and need for timely optimization and mobilization of the patient to the operating room
Level 3 Actively recognizes and mitigates communication barriers and biases with health care team members	 Communicates respectfully with trauma team the prioritization of stabilization in a polytrauma patient with an unstable pelvis fracture, femur fracture, and multiple visceral injuries Recognizes the need for respectful communication between services when a conflict arises regarding which service will admit the patient Communicates with the anesthesia team when specific parameters are needed prior to an issue arising Recognizes when operating room care team members are not focused during a surgical time-out
Level 4 Facilitates respectful communications and conflict resolution with multidisciplinary health care team members	 Initiates a multidisciplinary conversation to alleviate conflict around a shared care plan for a patient with unstable pelvis fracture, femur fracture, and multiple visceral injuries Attends medical rounds to review consult findings about the possible septic knee and provides education of the medical team about evaluation of a septic joint Respectfully calls for complete attention to surgical time out if necessary
Level 5 Serves as an exemplar of effective and respectful communication strategies	Mediates a conflict resolution between different members of the health care team
Assessment Models or Tools	 Direct observation Global assessment Multisource feedback Simulation Standardized patient

Interpersonal and Communication Skills 3: Communication within Health Care Systems Overall Intent: To effectively communicate across the health care system using the medical record		
Milestones	Examples	
Level 1 Accurately records information in the patient record while safeguarding patient personal health information	 Documents relevant information accurately Shreds patient list after rounds; avoids talking about patients in the elevator Maintains Health Insurance Portability and Accessibility Act (HIPAA) compliance with all communications 	
Level 2 Demonstrates accurate, timely, and efficient use of electronic health record to communicate with health care team members	 Documents clinical reasoning in an organized manner that supports the treatment plan Develops documentation templates to avoid copy-and-paste errors Completes documentation in a timely manner 	
Uses appropriate communication methods (e.g., face-to-face, voice, electronic)	 Appropriately escalates through chain of command when necessary Uses institution authorized methods when texting 	
Level 3 Concisely reports diagnostic and therapeutic reasoning while incorporating relevant outside data	 Documents a clear rationale for surgical and non-surgical treatment, including risks, benefits, and alternative treatments Obtains outside records including prior implant records 	
Respectfully initiates communications about concerns in the system	 Tells attending about an order set in the EHR with a medication dosing that could result in an error Identifies and reports safety near-misses using the hospital reporting system 	
Level 4 Independently communicates via written or verbal methods based on urgency and context	 Calls attending with level appropriate assessment and plan for surgical cases, including urgency, implants necessary and room set-up Triages and communicates time urgency of treatment of a polytrauma patient 	
Uses appropriate channels to offer clear and constructive suggestions to improve the system	Works with information technology/sends a help desk ticket to improve an order set or dot phrase	
Level 5 Facilitates improved written and verbal communication of others	Holds one-on-one teaching sessions with residents and medical students to improve documentation and hand-off techniques	
Guides departmental or institutional communication around policies and procedures	Gives grand rounds or resident lectures that includes care models/pathway utilization	
Assessment Models or Tools	 Direct observation Medical record (chart) review Multisource feedback Rotation evaluation

To help programs transition to the new version of the Milestones, the ACGME has mapped the original Milestones 1.0 to the new Milestones 2.0. Indicated below are where the subcompetencies are similar between versions. These are not exact matches but are areas that include similar elements. Not all subcompetencies map between versions. Inclusion or exclusion of any subcompetency does not change the educational value or impact on curriculum or assessment.

Milestones 1.0	Milestones 2.0
PC1: Pediatric Orthopaedics Idiopathic Scoliosis	PC4: Spine
PC2: Pediatric Developmental Dysplasia of Hip [DDH]	PC2: Hip Pathology
Prior to Walking Age	
PC3: Pediatric Orthopaedics Slipped Capital Femoral	PC2: Hip Pathology
Epiphysis [SCFE]	
PC4: Pediatric Orthopaedic Clubfoot	PC1: Foot Pathology
PC5: Pediatric Orthopaedics Lower Extremity Deformity	PC3: Lower Extremity Deformity
PC6: Pediatric Orthopaedics Cerebral Palsy	PC6: Neuromuscular
	PC5: Trauma
MK1: Pediatric Orthopaedics Idiopathic Scoliosis	MK4: Spine
MK2: Pediatric Developmental Dysplasia of Hip [DDH]	MK2: Hip Pathology
Prior to Walking Age	
MK3: Pediatric Orthopaedics Slipped Capital Femoral	MK2: Hip Pathology
Epiphysis [SCFE]	
MK4: Pediatric Orthopaedic Clubfoot	MK1: Foot Pathology
MK5: Pediatric Orthopaedics Lower Extremity Deformity	MK3: Lower Extremity Deformity
MK6: Pediatric Orthopaedics Cerebral Palsy	MK6: Neuromuscular
	MK5: Trauma
SBP1: Systems thinking, including cost-effective practice	SBP3: Physician Role in the Health Care Systems
SBP2: Resident will work in interprofessional teams to	SBP1: Patient Safety and Quality Improvement
enhance patient safety and quality care	SBP2: System Navigation for Patient-Centered Care
SBP3: Uses technology to accomplish safe health care	ICS3: Communication within Health Care Systems
delivery	
PBLI1: Self-Directed Learning	PBLI2: Reflective Practice and Commitment to Personal Growth
PBLI2: Locates, appraises, and assimilates evidence from	PBLI1: Evidence-Based and Informed Practice
scientific studies to improve patient care	
PROF1: Demonstrates compassion, integrity, and respect	PROF1: Professional Behavior and Ethical Principles
for others, as well as sensitivity and responsiveness to	
diverse patient populations, including to diversity in	

gender, age, culture, race, religion, disabilities, and sexual	
orientation. Demonstrates knowledge about, respect for,	
and adherence to the ethical principles relevant to the	
practice of medicine, remembering in particular that	
responsiveness to patients that supersedes self-interest is	
an essential aspect of medical practice	
PROF2: Demonstrates accountability to patients, society,	PROF2: Accountability/Conscientiousness
and the profession; demonstrates personal responsibility	PROF3: Self-Awareness and Help-Seeking
to maintain emotional, physical, and mental	
health	
ICS1: Communication	ICS1: Patient- and Family-Centered Communication
ICS2: Teamwork	ICS2: Interprofessional and Team Communication
